Windows Server Basics & Installation

❖ File Sharing in Windows ServerTheory :Introduction to file sharing and permissions.NTFS vs. Share permissions.Practical :Configure a shared folder with specific permissions.Task: Simulate access scenarios with different user permissions.

1. On your Windows Server VM, create a new folder named 'MusicShare' on the D: drive and share it with the network using the Share Wizard.

   - Step 1: Create the folder
     1. Log in to your Windows Server using an Administrator account.
     2. Open File Explorer.
     3. Open the D: drive.
     4. Create a new folder named:

     MusicShare
     The folder path should be:
     D:\MusicShare

   - Step 2: Configure sharing using Share Wizard
     1. Open Server Manager.
     2. Select File and Storage Services.
     3. Click Shares.
     4. Click Tasks → New Share.
     5. Select SMB Share – Quick and click Next.
     6. Select your server and the D: drive.
     7. Select the existing folder D:\MusicShare.
     8. Set the share name to MusicShare.
     9. Proceed to the permissions configuration.
     10. Click Customize permissions to configure access.
     11. Complete the wizard.

     Your network share path will be:
     \\Server-IP\MusicShare

     For example:
     \\192.168.1.10\MusicShare

2. Set NTFS permissions on the 'MusicShare' folder so that the user 'Student1' has Read & Write access, while 'Student2' has Read-only access.

   - We need to configure different permissions for both users.

User	NTFS Permission
Student1	Modify (Read & Write)
Student2	Read & Execute (Read-only)

   - Step 1: Open Security settings
     1. Right-click D:\MusicShare.
     2. Select Properties.
     3. Open the Security tab.
     4. Click Edit → Add.

   - Step 2: Add Student1
     1. Enter Student1.
     2. Click Check Names → OK.
     3. Select Student1.
     4. Allow the following permissions:
     5.

Permission	Status
Full Control	Deny/Unchecked
Modify	Allow
Read & Execute	Allow
List Folder Contents	Allow
Read	Allow
Write	Allow

   - Step 3: Add Student2
     1. Click Add.
     2. Enter Student2.
     3. Click Check Names → OK.
     4. Select Student2.
     5. Allow these permissions:

Permission	Status
Full Control	Unchecked
Modify	Unchecked
Read & Execute	Allow
List Folder Contents	Allow
Read	Allow
Write	Unchecked

3. Configure Share permissions for 'MusicShare' so that only members of the 'MusicLovers' group can access the share, and all others are denied.

   - Step 1: Open Advanced Sharing
     1. Right-click D:\MusicShare.
     2. Select Properties.
     3. Open the Sharing tab.
     4. Click Advanced Sharing.
     5. Enable Share this folder.
     6. Set the Share name to MusicShare.
     7. Click Permissions.

   - Step 2: Configure group permissions
     1. Remove Everyone from the list.
     2. Click Add.
     3. Enter MusicLovers.
     4. Click Check Names → OK.
     5. Select the MusicLovers group.
     6. Allow the following permissions:

Permission	**Status**
Full Control	Unchecked
Change	Allow
Read	Allow

   - Keep the Administrators group with Full Control for server administration unless your lab specifically requires removing administrative access too.

   - Step 3: Verify group membership
     Open Active Directory Users and Computers.
     1. Find the MusicLovers group.
     2. Double-click it.
     3. Open the Members tab.
     4. Ensure both users are members:

4. Simulate these access scenarios: log in as 'Student1' and try to copy a file into 'MusicShare', then log in as 'Student2' and attempt to delete a file from the same folder. Write down what happens in each case and explain why based on the permissions set.

- **Scenario 1: Login as Student1 – Copy a file**
  Steps:
  1. Log in to the client PC using the Student1 account.
  2. Press Win + R.
  3. Enter the network share path:

  \\192.168.1.10\MusicShare
  Replace the IP with your actual server IP.
  4. Press Enter.
  5. Copy any test file from the client computer.
  6. Paste it inside the MusicShare folder.
  Expected Result: Successful

- Observation: Student1 can successfully copy files into the MusicShare folder.
- Reason: Student1 has Modify permission through NTFS and Change permission through the share. Both permissions allow writing files.

➢ **Scenario 2: Login as Student2 – Delete a file**

- Steps:
  1. Log out from Student1.
  2. Log in to the client PC using the Student2 account.
  3. Open the shared folder:
     \\192.168.1.10\MusicShare
  4. Open an existing test file.
  5. Right-click the file and select Delete.
